

# Installation instructions

WindowBlinds skins are selected from the WindowBlinds application. You should have **Windowblinds** installed in your computer.

*\*For Windows 8 and 10 you also need **Start10** installed, if you want to have a Windows 7 style skinned Start menu.*

## Install a skin from disk

**WindowBlinds skins** have a **.wba** file extension and can be installed in your computer by double-clicking on them with the left mouse button in Windows Explorer.

## Skin/Theme selection

To change or apply a skin, simply select it from the Windowblinds application window and apply it using the button “Apply style to desktop”. This will load the skin and immediately apply it to all open and new windows on the system. The listing of skins installed is refreshed when you install/delete a skin.

That is all you need to do for a fresh new look in your computer!

\*For **free** or **full versions** of **Windowblinds** and **Start10** menu use the following links to download them:
